

Solfaic V2

Revised sitemap

1. A new, simple landing page

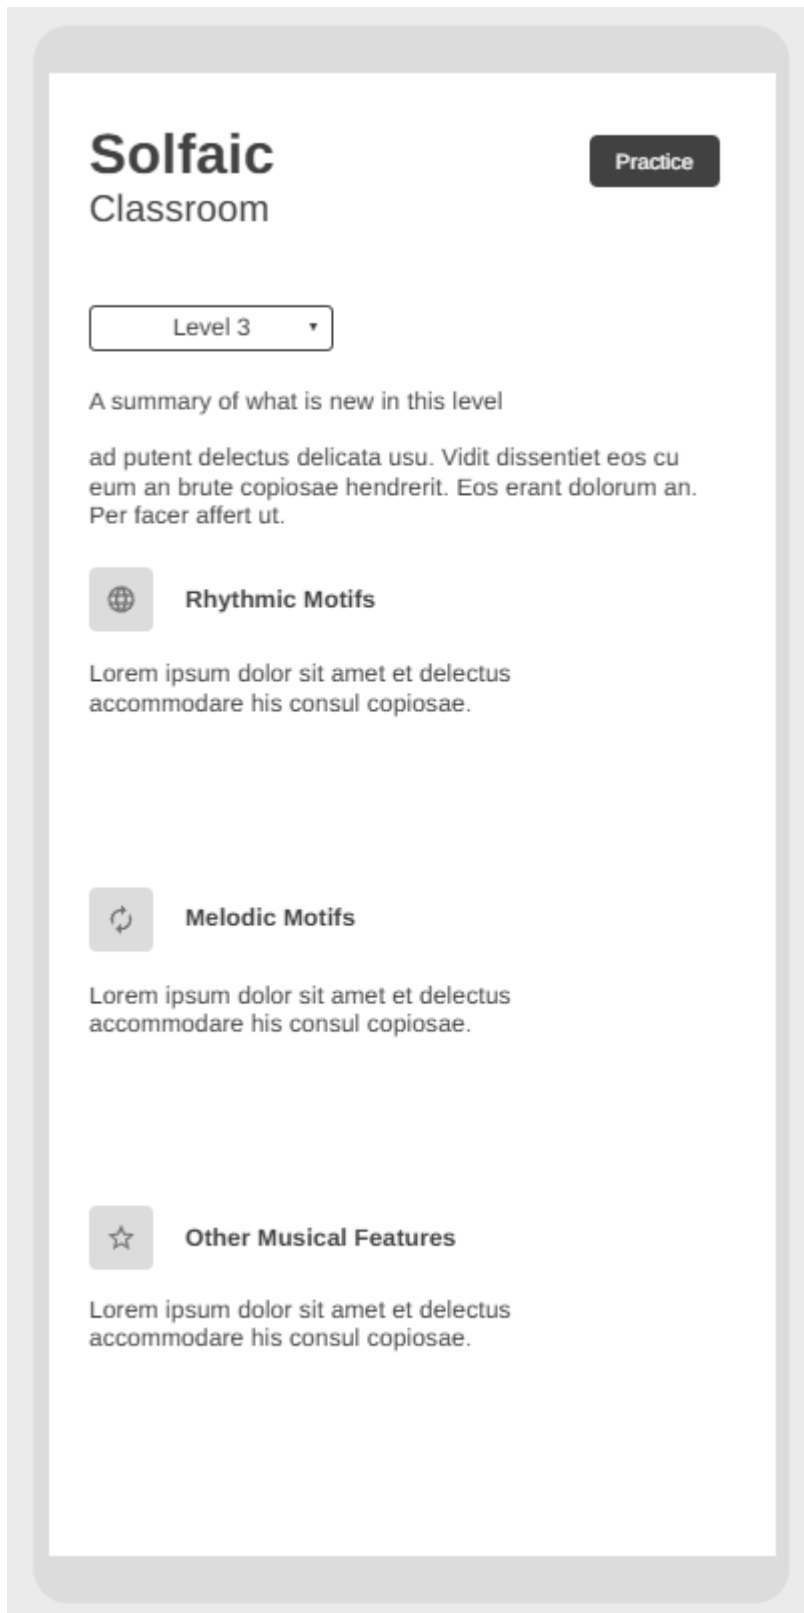

- Traditional nav bar (hamburger for mobile)
 - Home
 - Classroom
 - Practice Room
- Hero with CTA "Practice Now" or "Start"
- Footer
- Logo: animation "drawn on" navigating the 8 colours used for the solfege buttons in the tool

(v2-wireframe-home)

2. Classroom

- How to use and CTA to Practice Room
- New home for existing Kodaly matrix and supplementary explanations etc
- Introductory learning content for each level (togglable) including video explanations

(v2-wireframe-classroom)

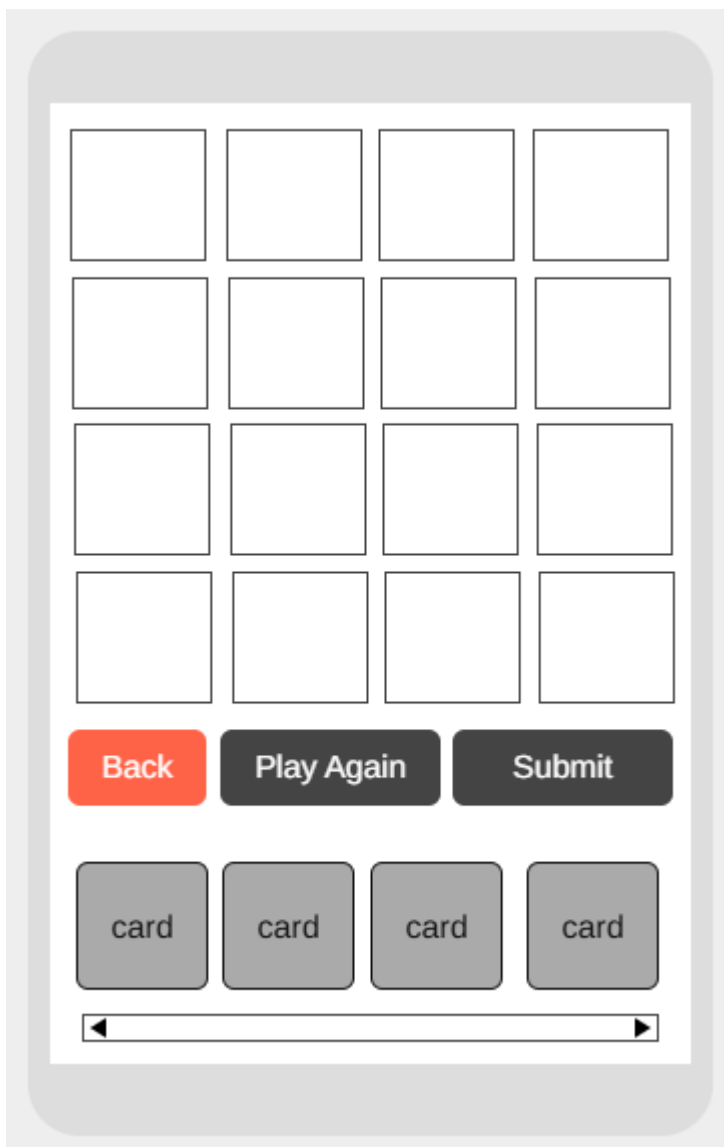

3. Practice Room

The “focus mode” practice session

Focus: To strip away what the user does not need when completing practice

Required:

- Workspace grid
- Simple Buttons (back to classroom (← class), submit button, replay button)
- A new reel to navigate input cards (when input cards number exceed viewport width)
- Cards on the reel should animate off and on to the viewport in an interesting way (perhaps like rolodex)
- Very THIN header with level number and streak pips (left), and metre (simple/compound) and bar numbers indicator (right)

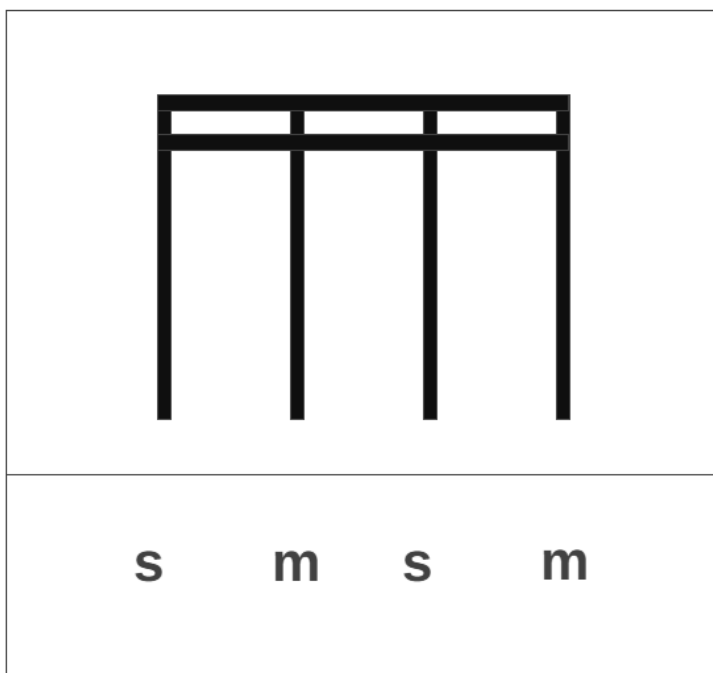

v2-wireframe-practice)

Workspace Cards

Layout: 4 x 4 Grid, noting not all boxes will be required for every level - it's 16 bars maximum. Therefore, boxes that are not required for a given exercise should be disabled and greyed out.

Each box contains a container. Each container contains two variable state cards:

- They must align. I.e. Where the vertical 'sticks' are placed in the 'stick notation' card must vertically align with the solfege letter input beneath.
 - Rhythm SVG's must therefore be proportionate to its card container - the vertical sticks must occupy the same relative space within its container at any size.
- There are currently a maximum of 4 sticks (semiquaver group) to be factored in the internal layout. However, equal spacing should exist for each rhythm card, noting the relative space required for ta vs ti within the same card, or ti-tika, or syn-co-pa, etc.
- The rhythm card chosen in the previous round (as it will be divided into rhythm THEN pitch), will determine the number of columns required in the solfege letters card, and their spacing. Therefore, the rhythm cards should have the required number of notes and their column spacing baked into them. E.g.
 - Ta - one column, centered
 - Ti-ti - two columns, centered in each
 - Ti-ti-ti - three columns, centered in each
 - Ta-ti - three unequal columns, first two merged and centered, plus third smaller one.
 - Ti-tika - four unequal columns, first two merged, then two smaller ones.

(v2-box-design)

Card behaviours required (UX)

- Selecting cards from the reel automatically populates the empty workspace cards from left to right.
 - Users can select from the reel during playback.
 - Tapping a workspace card brings it into focus, allowing the user to edit the contents of that specific card in the usual way.
 - Tapping and holding a card brings up a vignette of the card (smooth animation) filling the width of the viewport, and spotlighting that specific card (the rest of screen goes grey) whilst maintaining the motif reel below too, allowing the user to easily select the specific solfege letter or rhythm motif card they might like to edit. In this view, the top right of the focussed card has an escape (X) to return to normal view.
-

Pattern Library

Global (Home and Classroom)

- Dynamic Nav (Home, Classroom)
- Footer (Home, Classroom)
- Button

Home

- Hero with animated hero image and possible 'on scroll' transition to any content
- Nav Logo underneath

Classroom

- Level dropdown selector
- Dynamic Content Cards
- Nav Logo with "Classroom" underneath in secondary typography

Practice Room

- Practice reel
 - Workspace grid
 - Workspace card
-

Colour Palette Options

- <https://coolors.co/4c5454-ff715b-ffffff-1ea896-523f38>
- <https://coolors.co/202020-f9c22e-1be7ff-6eeb83-ff5714>

Surface (background)	Alabaster Grey		A soft, warm off-white that reduces glare.
Surface (card/UI)	White	#FFFFFF	Provides a crisp "sheet music" container effect.
Primary (Brand)	Atomic Tangerine	FF6B35	The hero color for primary actions/buttons.
Secondary (Accent)	Golden Pollen	FFC857	Used for active states, highlights, or secondary tools.
Success	Muted Teal	82B895	A slightly deeper, more legible version for light backgrounds.
Text (Primary)	Graphite	2D2D2D	High legibility; much softer than harsh black.
Text (Muted)	Charcoal	545454	For secondary text, labels, and helper info.

```

```css
:root { /* Primitive Tokens */ --color-alabaster-grey: #DDDDDD; --color-white: #FFFFFF;
--color-atomic-tangerine: #FF6B35; --color-golden-pollen: #FFC857; --color-muted-teal: #82B895;
--color-graphite: #2D2D2D; --color-charcoal: #545454; /* Semantic Tokens */ --bg-app:
var(--color-alabaster-grey); --bg-card: var(--color-white); --action-primary:
var(--color-atomic-tangerine); --action-secondary: var(--color-golden-pollen); --status-success:
var(--color-muted-teal); --text-main: var(--color-graphite); --text-helper: var(--color-charcoal); }
```

```

Typography Pairing Ideas:

Solfaic and Sora

Solfaic , Rokkitt, and Imprima

Solfaic and Maitree

Solfaic for brand name, Arvo for body?

Solfaic and poppins

Typography scale

(based on 320px to 1240px viewport width, at a 1.2 (major third) ratio)

File Directory

1. Solfaix V1 was a monolith.
 - a. 1630 lines of CSS in one file
 - b. 1619 lines of JavaScript in another file.
 2. Adopting CUBE CSS methodology, Solfaic V2 will organise CSS and JS in a more maintainable, organised manner.
 3. A new src folder:
 - a. css/index.css; /global; /compositions; /blocks; /utilities
 - b. js/app.js; /audio.js; /core.js; /data.js; /engine.js; /state.js;
 - c. new JS modules to handle the melodic engine, classroom interactivity, and a possible solution to SVG generation
-
